Just one preliminary example, many more dimensions can be elaborated / discussed

Multiple worlds of making connections of various fields

- “If you want to be smart like Einstein, it’s all about having the proper connections” (The Brain – The Ultimate Guide pg.69)
- “Instead of looking toward a single region of the brain for answers, scientists are focusing on the various circuits that connect multiple brain areas.” (ibid. Pg. 72)
- “Intelligence and creativity are linked to how fast your brain works and your own unique neural connections.” (ibid. Pg. 70)
- “.....successful innovation depends less on how smart you are than how connected you are

A possible hypothesis to explore further:

Making nets of ideas and the nets of subjects in our learning environment can also inspire unique and faster neural connections to facilitate our learning, innovation and understanding

“The construction of stronger, more efficient networks (faster retrievals, greater transfer) in long-term memory is stimulated by repeated activation of the circuit, such that practice makes permanent.”
